                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         T08148

proline-rich myrosinase-binding protein homolog - rape (fragment)

proline-rich myrosinase-binding protein related protein

C;Species: Brassica napus (rape)

C;Date: 21-May-1999 #sequence_revision 21-May-1999 #text_change 08-Oct-1999

C;Accession: T08148

immediate-early protein IER2.9 - bovine herpesvirus 1 (strain K22)

NAlternate names early protein ER2.6; pl35 protein
C;Species: bovine herpesvirus 1
C;Date: 31-Dec-1992 #sequence_revision 31-Dec-1992 #text_change 17-Mar-2000
C;Accession: A38209
R;Wirth, U.V.; Fraefel, C.; Vogt, B.; Vlcek, C.; Paces, V.; Schwyzer, M.
J; Virol. 66, 2763-2772, 1992
A;Nitte: Immediate-early RNA 2.9 and early RNA 2.6 of bovine herpesvirus 1 are 3' coter A;Reference number: A38209
A;Accession: A38209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A; Residues 1.fe76 < WIR>

May contribute to the native pacemaker currents in heart (If) and in neurons (Ih). Activated by CAMP (By similarity). May mediate responses to sour stimuli.

-: SUBUNIT: The potassium channel is probably composed of a homo- or heterotetrameric complex of pore-forming subunits.

-: SUBCELLUIAR LOCATION: Integral membrane protein.

-: TISSUE SPECIFICITY: Detected in a subset of elongated cells in

Tampoing the termini and intron of the spliced immediate-early
transcript of equine herpesvirus 1.";
J. Virol. 63:5101-5110(1989).
C. I. FUNCTION: THIS IE PROTEIN IS A MULTIFUNCTIONAL PROTEIN CAPABLE
OF MIGRATING TO THE NUCLEUS, BINDING TO DNA, TRANS-ACTIVATING
C. PTHR. VIRAL GENES, AND AUTOREGULATING ITS OWN SYNTHESIS.
IS SUBCELLULAR LOCATION: NUCLEUS OF INFECTED CELLS.
C. PTH: A LONG STRETCH OF SERINE RESIDUES NAY BE A MAJOR SITE OF
PHOSPHORYLATION.
C. I. SIMILARITY: BELONGS TO THE ICP4/IE140/IE180 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Grundy F.J., Baumann R.P., O'Callaghan D.J.;

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TMF) family, which is associated with the expression of Decells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune diseases, which can be treated or prevented by BAFF-R, include systemic lugus erythematosus, rheumatoid arthritis, mysethenia gravis, autoimmune haemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease crave's disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomenionomytris. Plasma cells disorders e.g., multiple myselmen, Waldenstrom's, macroglobulinaemia, heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in screening assays, in detection assays (chromosomal mapping, tissue typing or forensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens that modulate BAFF antibodies, or in the prosecting decenting drugs or compounds that modulate anti-BFFR antibodies, or in consonant and procession.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           QESVGAGAGEAALPLPGLLFGAPALLGLALVLALVLVGLVSWRRRQRRLRGASSAEAPDG 120

The present sequence represents a human tumour necrosis factor receptor designated Ztnfr12 (1). (1) has cytostatic, immunosuppressive, dermatclogical, antihilanmanatory, neuroprotective, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, antidiabetic, nephrotropic and hypotensive activities and can be used in gene therapy. (1) can be used for inhibiting, in a mammal, the activity of a ligand that binds Ztnfr12 (e.g. ZTNF4), for treating disorders and disease associated with B lymphocytes, activated B lymphocytes or resting B lymphocytes, and for inhibiting the proliferation of tumour cells. (1) is useful for treating autoimmune disorders such as systemic lupus erythematosus, myasthenia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, rematoid arthritis, bronchitis, emphysema and end stage renal failure or renal disease such as glomerulonephritis, vasculitis, chronic lymphoid leukaemis, nephritis, and pyelonephritis, and for treating renal neoplasms, multiple myelomas, light chain neuropathy, or myloidosis, hypertension, large vessel disease, graft rejection and Czohn's disease, graft rejection and Czohn's disease. (1) is useful for modulating the immune system, for regulating B cell responses and charled the multiple mylonia production, and for modulating T and B cell communication. Human Ztnfr12 is located to chromosome 22q13.2.
                                                                                                                                                                           Human, Ztnfr12; tumour necrosis factor receptor; cytostatic; immunosuppressive; dermatological; antinflammatory, antidiabetic; networpertective; antinfheumatic; antianthritic; antiasthmatic; nephrotropic; hypotensive; gene therapy; Blymphocyte; tumour; autoimmune disorder; systemic lupus erythematosus; myasthenia gravis; multiple sclerosis; insulin dependent diabetes mellitus; asthema; rheumatoid arthritis; bronchitis; emphysema; renal disease; lymphoma; glomerulonephritis; renal neoplasm; multiple myeloma; amyloidosis; light chain neuropathy; hypertension; large vessel disease; graft versus host disease; graft rejection; Crohn's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated human tumor necrosis factor receptor polypeptide, te
Ztnfr 12, useful for treating autoimmune disorders, emphysema, end
stage renal failure or renal disease and lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Grant FJ;

The invention is used to manufacture a medicament for inhibiting the proliferation of tumour cells in a mammalian subject. The composition comprising the fusion protein may also be used in treating autoimmune diseases (e.g. systemic lupus erythematosus, multiple sclerosis, diabetes mellitus, rheumatoid arthritis and asthma),
                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a human BR3 polypeptide. The specification also describes TACI polypeptides. TACI and BR3 are receptors. Thmour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; TACI; BR3; receptor; tumour necrosis factor ligand; TNF ligand; TALL-1; April; systemic lupus erythematosus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TMF) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autorimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal

disorders, inflammation, organ transplantation and HIV. Autoimmune diseases, which can be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthenia gravis, autoimmune haemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease care anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma cells disorders e.g., multiple myabloma, Waldenstrom's, macroglobulinaemia, heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodises may further be used in screening assays, in detection assays (chromosomal mapping, tissue typing or foresic biology) predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR antibodies, or in screening drugs or compounds that modulate BAFF-R activity or expression. The present sequence is human mature JSE756 (BAFF-R) cDNA spliced version containing 5' UTR encoded protein.

(BIOJ) BIOGEN INC. Misc-difference mutant; mutein. WO200224909-A2 Homo sapiens .8-SEP-2000; 14-AUG-2001; 25-JUL-2002 Ambrose CM, 28-MAR-2002 The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-call activating factor belonging to the Tumour Decreasis Factor [Typ] family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, organ transplantation and HIV. Autoimmune beemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease, cardi-phospholipid syndrome, Wegener's grannibmatosis, poly-arteritis nodes and rapidly progressive glomerulonephritis. Plasma classes, anti-phospholipid syndrome, Wegener's grannibmatosis, poly-arteritis nodes and rapidly progressive glomerulonephritis. Plasma classes, anti-phospholipid syndrome, Wegener's grannibmatosis, poly-arteritis nodes and rapidly progressive glomerulonephritis. Plasma classis, poly-arteritis in disease, nultiple myeloma, Waldenstrom's macroglobulinaemia, monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in screening assays, in detection assays (chromosomal mapping, rissue typing or forensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to rasis anti-BFR activity or expression. The present sequence is human BAFF-R protein mutant.

The present sequence is not shown in the specification but is derived from human BAFP-R protein mutant.

In fig 2d of the specification. New human BAFF receptor proteins and nucleic acids, useful for treating, preventing or delaying e.g. autoimmune diseases, cancers, inherited genetic disorders involving B-cells, cardiovascular disorders, or renal disorders Example 17; Page -; 164pp; English. 13-FEB-2001; 2001US-268499P

The invention relates to human BAFF receptor (BAFF-R) mucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Nectors as factor (TMF) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourispenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, organ transplantation and HIV. Autoimmune become to be treated or prevented by BAFF-K, include systemic laseases, which can be treated or prevented by BAFF-K, include systemic lasemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease correction and rapidly progressive glomerulonephritis. Plasma classes, anti-phospholipid synforme, Wegener's granulomatosis, oply-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma classes, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein homologues, and antibodies may further be used in protein homologues, and antibodies may further be used in creening assays, in detection assays (chromosomal mapping, tissue typing are further useful as immunogens to raise anti-BFFR antibodies, or in a screening drugs or compounds that modulate BAFP-R activity or expression. The present sequence is human BAFP-R protein mutant.

Note: The present sequence is not shown in the specification but is delived from human BAFP-R protein mutant.

Note: The present sequence is not shown in the specification but is in fig 2d of the specification. CC Becells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, treating, preventing or delaying autoimmune diseases, cancer, tumouridenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal diseases, which can be treated or prevented by BAFF-R, include systemic diseases, which can be treated or prevented by BAFF-R, include systemic classes, which can be treated or prevented by BAFF-R, include systemic diseases, anti-phospholipid syndione, Wegener's gravis, autoimmune crave's disease, anti-phospholipid syndione, Wegener's granulomatosis, poly-arteritis modosa and rapidly progressive glomerulonephritis. Plasma calls disorders e.g., multiple myeloma, Walenstrom's macrosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, cannoclonal gammopathy of undetermined significance. The nucleic acids, cor forening assays, in detection assays (ohromosomal mapping, tissue typing or forening assays, in detection assays (ohromosomal mapping, tissue typing or forenic biology), predictive medicine (e.g. diagnostic or prognostic assays; monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR activity or expression. The present sequence is human BAFF-R protein mutant.

Cracening drugs or compounds that modulate BAFP-R activity or expression. The present sequence is not shown in the specification but is characteried as SEQ ID NO: 5 (AAE22242) and shown with the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour becrosis Factor (TWF) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal diseases, inflammation, organ transplantation and HIV. Autoimmune cliseases, inflammation, organ transplantation and HIV. Autoimmune heaving the an be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthemia gravis, autoimmune heaving an anti-phospholipid syndrome, Wegener's granulomatosis, or poly-arteritis nodosa and rapidly progressive glomerulomephritis. Plasma cells disorders e.g., multiple myelome, Wegener's granulomatosis, and heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies and further be used in correctin protein and antibodies and antibodies or prognostic assays, monitoring clinical trials, or pharmacogenomic). The prise typing or compounds that modulate BAFF-R activity or expression. The present sequence is human BAFP-R protein mutant.

Conference of the present sequence is nown in the specification but is defined that modulate as Day (DA DA DA) and shown conference is now and the protein as BAFP-R activity and shown conference is now and as SEQ ID NO: 5 (AABE2242) and shown conference is now and as SEQ ID NO: 5 (AABE2242) and shown conference in the present sequence is now in the specification and shown conference and an antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human BAFF receptor proteins and nucleic acids, useful for treating, preventing or delaying e.g. autoimmune diseases, cancers, inherited genetic disorders involving B-cells, cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 17; Page -; 164pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in fig 2d of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         disorders, or renal disorders

human BAFF receptor proteins and nucleic acids, useful for thing, preventing or delaying e.g. autoimmune diseases, cancers, writed genetic disorders involving B-cells, cardiovascular disorders, or renal disorders treating, inherited

Example 17; Page -; 164pp; English.

The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TNF) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disoaders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, organ transplantation and HIV. Autoimmune be treated or prevented by BAFF-R, include systemic lupus erythematosus, rheumatoid arthritis, myasthemia gravis, autoimmune commonytic anaemia, idiopathic thrombocyteopaemia purpura, Chagas' disease care, disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma calls disorders e.g., multiple myeloma, Waldenstrom's, macroglobulinaemia, heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in

```
or forensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR antibodies, or in screening drugs or compounds that modulate BAFF-R activity or expression. The present sequence is human BAFF-R protein mutant.

Note: The present sequence is not shown in the specification but is derived from human BAFF-R referred as SEQ ID NO: 5 (AAE22242) and shown in fig 2d of the specification.
                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumour Necrosis Factor; autoimmune disease; immunosuppressive; cancer; myasthenia gravis; hypertension; organ transplantation; drug screening; HIV; human immunodeficiency virus; genetic disorder; cardiovascular; renal; rheumatoid arthritis; systemic lupus erythematosus; amyloidosis; haemolytic anaemia; Chagas' disease; Grave's disease; glomerulonephritis; multiple myeloma; chromosomal mapping; tissue typing; drug screening;

```
The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Nectains. BAFF-R is a B-cell activating factor belonging to the Tumour Nectains and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal disorders, inflammation, organ transplantation and HIV. Autoimmune disorders, inflammation, organ transplantation and HIV. Autoimmune beemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease Grave's disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomeralonaphritis. Plasma cells disorders e.g. multiple myeloma, Waldenstrom's macrosis, only-arteritis nodosa and rapidly progressive glomeralonaphritis. Plasma cells disorders e.g. multiple myeloma, Waldenstrom's macroglobulinaemia, protein, protein homologues, and antibodies may further be used in monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodies may further be used in greening assays, in detection assays (chromosomal mapping, tissue typing or forensic biology), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR antibodies, or in screening drugs or compounds that modulate BAFP-R activity or expression. The present sequence is human BAFP-R protein mutant.

The present sequence is not shown in the specification but is darived from human BAFP-R protein mutant.

                    Mouse; TRAF3-binding B cell-specific receptor; TRAF3; signal transduction; TNF ligand; cancer; autoimmune disease; apoplexia, viral infection; ALDS; bone disease; transplantation rejection; Alzheimer's disease; ischaemla; rheumatoid arthritis; cachexia.
                                                                                                                                                                                                                                                                                                            TRAF3-binding B cell-specific receptor and encoded gene, applicable in diagnosis of abnormality due to TRAF3-mediated intracellular signal transduction and in screening drugs for e.g. cancer, autoimmune diseases and AIDS
                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a murine TRAP3-binding B cell-specific receptor. The polymucleotide and polypeptide sequence of this receptor are useful for disgnosis of abnormality due to TRAP3-mediated intracellular signal transduction and in screening drugs for diseases associated with TNF ligand family and TNF receptor-ligand superfamily e.g. cancer, autoimmune diseases, viral infections like AIDS, bone diseases, transplantation rejection, Alzheimer's disease, ischaemia, rheumatoid arthritis, apoplexia and cachexia.
Amino acid sequence of murine TRAF3-binding B cell-specific receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16;

The present invention describes a human tumour necrosis factor receptor designated Ztnfr12 (1). (1) has cytostatic, immunosuppressive, designated Ztnfr12 (1). (1) has cytostatic, immunosuppressive, derivated, antidiabetic, and can be used in gene therapy. (1) can be used for inhibiting, in a mammal, the activity of a ligand that binds Ztnfr12 (e.g. ZTNF4), for treating disorders and diseases associated with B lymphocytes or resting B lymphocytes, and for inhibiting the proliferation of tumour cells. (1) is useful for treating autoimmune disorders such as systemic lupus erythematosus, myasthenia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, rheumatoid arthritis, bronchitis, emphysema and end stage renal failure or renal diseases such as sjonerulonephritis, and for treating renal neoplasms, multiple myelomas, lymphomas, light chain neuropathy, or emphasions, myalthemsian, hypertension, large vessel diseases, graft-versus host disease, graft rejection and crohn's disease. (1) is useful for modulating the immune system, for regulating B cell responses and development, for modulating the development of other cells, antibody communication. The present sequence represents mouse Ztnfr12 which is communication. The present sequence represent invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel isolated human tumor necrosis factor receptor polypeptide, termed Ztnfr 12, useful for treating autoimmune disorders, emphysema, end stage renal failure or renal disease and lymphoma
Human, Ztnfr12; tumour necrosis factor receptor; cytostatic; immunosuppressive; dernatological; antiinflammatory; antidiabetic; neuroprotective; antirheumatic; antiarthritic; antiarthmatic; nephrotropic; hypotensive; gene therapy; B lymphocyte; tumour; autoimmune disorder; systemic lupus erythematosus; myasthenia gravis; multiple sclerosis; insulin dependent diabetees mellitus; astromic; rheumatoid arthritis; bronchitis; emphysema; renal disease; lymphoma; glomerulonephritis; vasculitis; chronic lymphoid leukaemia; nephritis; pyelonephritis; renal neoplasm; multiple myeloma; anyloidosis; light chain neuropathy; hypertension; large vessel disease; graft-versus host disease; graft rejection; Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         6 RSLRGRDAPAPTPCVPAECFDLLVRHCVACGLLRTPRPKPXAGASSPAPRTALQPQESVG

Grave's disease, anti-phospholipid syndrome, Wegener's granulomatosis, poly-arteritis nodosa and rapidly progressive glomerulonephritis. Plasma cells disorders e.g., multiple myeloma, Waldenstrom's, macroglobulinaemia, heavy-chain disease, primary or immunocyte-associated amyloidosis, and monoclonal gammopathy of undetermined significance. The nucleic acids, protein, protein homologues, and antibodises may further be used in screening assays, in detection assays (chronsomal mapping, tissue typing or forensic bloiogy), predictive medicine (e.g. diagnostic or prognostic assays, monitoring clinical trials, or pharmacogenomic). The polypeptides are further useful as immunogens to raise anti-BFFR antibodies, or in screening drugs or compounds that modulate BAFF-R activity or expression. The present sequence is murine BAFF-R protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human BAFF receptor (BAFF-R) nucleic acids and proteins. BAFF-R is a B-cell activating factor belonging to the Tumour Necrosis Factor (TNF) family, which is associated with the expression of B-cells and immunoglobulins. The BAFF-R proteins, DNA and antibodies are useful for treating, preventing or delaying autoimmune diseases, cancer, tumourigenic conditions or inherited genetic disorders involving B-cells, hypertension, cardiovascular disorders, immunosuppressive diseases, renal diseases, which can be treated or prevented by BAFF-R, include systemic lugus erythematosus, rheumatoid arthritis, myasthenia gravis, autoimmune haemolytic anaemia, idiopathic thrombocytopaenia purpura, Chagas' disease

```
New nucleic acid encoding a TACIs or BR3 polypeptide, useful for preparing a composition for treating systemic lupus erythematosus
                                                                                                                                                                                                                                                          present sequence represents a murine BR3 polypeptide.
```

```
specification also describes TACI polypeptides. TACI and BR3 are receptors. Tumour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus.
                                                                                                                                                                   Sequence 175 AA;
